PROFESSIONAL EXPERIENCE

ServiceNow Developer

INFOSYS Ltd

June 2023 – June 2025

Responsibilities:

- Developed and maintained Service Catalog Items and Record Producers.
- Created Client Scripts and UI Policies to improve user experience and automate form behavior.
- Developed Business Rules and Script Includes for server-side automation.
- Implemented approval workflows using Flow Designer.
- Configured email notifications and event-based automation.
- Worked with Import Sets and Transform Maps for data migration activities.
- Managed Update Sets and promoted changes across environments.
- Participated in Incident, Problem, Change, and Request Management processes.
- Collaborated with stakeholders to gather requirements and deliver ServiceNow solutions.

Key Achievements:

- Reduced manual request processing through workflow automation.
- Improved catalog usability through dynamic forms and validations.
- Enhanced incident assignment efficiency through automation rules.

Network Engineer

INFOSYS Ltd

June 2022 – May 2023

Responsibilities:

- Monitored and maintained enterprise network infrastructure.
- Configured and managed Cisco network devices.
- Troubleshoot LAN and WAN connectivity issues.
- Supported VLAN configuration and network changes.
- Performed incident analysis and root cause identification.
- Worked closely with IT operations teams to resolve service disruptions.
- Maintained network documentation and operational procedures.

PROJECTS

1) Employee Onboarding Automation

Technologies: Service Catalog, Flow Designer, Notifications

- Developed onboarding request process using Service Catalog.
- Configured approval workflows.
- Automated task creation and notifications.
- Improved onboarding process efficiency.

2) Asset Request Management

Technologies: Service Catalog, Client Scripts, Flow Designer

- Developed self-service asset request solution.
- Implemented approval workflows.
- Automated fulfillment process.

3) Incident Auto Assignment Solution

Technologies: Business Rules, GlideRecord

- Automated incident assignment based on category and priority.
- Configured assignment groups.
- Reduced manual routing effort.
